FAMILY HEALTH Family health is a state in which the family is a resource for the day-to-day living and health of its members. A family provides its individual members with key resources for healthful living, including food, clothing, shelter, a sense of self-worth, and access to medical care.

Family Health | Encyclopedia.com

This encyclopedia gathers together valuable articles on the interrelatedness of family and health. One example is the article on bipolar disorders and the family, which points the reader toward "expressed emotion" literature as it relates to family members. While the physician recognizes mental illness as an illness,...

Family health history is an unassuming and often overlooked, but essential data element in HRAs. For many conditions, family health history is the strongest predictor of disease risk and for some, such as hereditary cardiovascular syndromes, it is the only predictor (and thus the only component of the HRA) (see Table 1.1).
