Re-typed from The Ultimate Chemical Equations Handbook by Hague and Smith Ternary Nomenclature: Acids and salts Containing Halogens and/or Oxygen 1. The halogens, with their variable oxidation numbers, allow for a great variety of compounds. 2. A good way to learn ternary nomenclature is to start with a certain HOI\<IE {3/1–E" polyatomic ion.

Re-typed from The Ultimate Chemical Equations Handbook by ...

The Ultimate Chemical Equations Handbook Determine the oxidation number of the underlined element: KMnO4. Since K is an alkali metal, its charge must be 1+. Oxygen is 2— but there are four of them, therefore, 4 times 2— equals 8—. If 1+ and 8— are added together, we get 7—. In order for the compound to be neutral, the Mn must be 7+.
